

Outside Weatherable Film

Upgrade your school or commercial building with the advanced technology of Outside Weatherable Film—a weather-resistant solution designed to enhance comfort, energy efficiency, and overall performance. This exterior-grade window film is specially crafted with a high-tech, scratch-resistant coating, ensuring durability even when exposed to harsh outdoor elements.

Advantages for Schools and Commercial Buildings

Enhanced Comfort: Outside Weatherable Film offers maximum solar heat rejection by reflecting solar energy away from the windows. Say goodbye to uncomfortable hotspots and welcome a more pleasant indoor environment for students, employees, and visitors.

Reduced Glare: This film effectively reduces glare caused by intense sunlight, providing a more conducive learning and working atmosphere with improved visibility on screens and workstations.

UV Protection: Shield your interiors from harmful UV rays. Outside Weatherable Film blocks up to 99% of UV radiation, safeguarding furniture, equipment, and valuable assets from fading and damage.

Energy Efficiency: Enjoy significant energy savings on cooling costs. The film expels absorbed solar energy outdoors, reducing stress on the glass and maintaining a cooler indoor temperature.

Safer for Double-Paned Glass: With outside application, the film mitigates the risk of temperature-related stress on double-paned glass, ensuring the safety and longevity of your building's windows.

Long-Lasting Performance: Benefit from a lasting investment. Professionally installed Outside Weatherable Film can maintain its effectiveness for over a decade, providing consistent results year after year.
